

# Framing the Discussion

(a) How do you see data science? How do you (or do you) distinguish data science from AI?

(b) What are the key data science related problems that concern you in your sector?

(c) What are your experiences in working with universities on joint research problems? What major difficulties did you have encountered (e.g., IP issues)?

(d) What is the availability (or limitations on availability) of real data for R/D in your sector?
